Materials You Can Use with the Vinyl Cutter Main Points

o There are three types of vinyl in the Innovation Lab:
   - Glossy, waterproof vinyl (651)
   - Matte, wall decal vinyl (631)
   - Heat transfer vinyl

o Always check the Innovation Lab remnants box to see if there is a piece of vinyl you can use for your project before starting to cut a new roll. This helps us to use our resources wisely and prevents waste. The type of vinyl in the remnants box can be identified by checking the back.
   - Glossy, waterproof vinyl = 651
   - Matte, wall decal vinyl = 631

o The vinyl cutter can also cut certain non-vinyl materials. Examples include fabric, cardstock, thin cardboard, and paper. These materials must be less than 0.1 mm thick and between 50 - 700 mm wide. Always check with an Innovation Lab staff member before attempting to cut any non-vinyl material.
